DETAILED ACTION

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 2-7, 17-29, and 33-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marks in view of Griffith and further in view of Acar of record.

The present amendment is essentially the combination of claim 15 with the independent claim. Accordingly, the Acar reference is combined as of record to provide the rejection for the limitation to use electrokinetic treatment to supply cohesion inducing material as claimed.

Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Marks in view of Griffith, Acar and further in view of Doring.

Response to Arguments

Applicant's arguments filed 8/24/04 have been fully considered but they are not persuasive.

Applicants argue that the Marks and Griffiths patents disclose the remediation of the substrate mass by the use of chemical or bio-chemical remediation to alter the chemical or bio-chemical properties of the mass. The

argument further argues that there is no suggestion in the prior art of record that the particular effectiveness of the present invention to drive cohesion inducing species through the substrate mass.

The prior art of Acar has been cited in the record to show the use of electrokinetic process to add stabilizer or cohesion inducing material, such as the materials claimed, to condition the substrate (see claims 3-4).

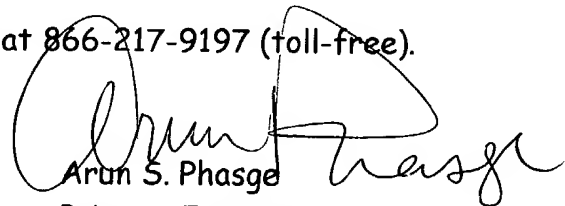

Accordingly, the claims stand rejected.
